## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Minami et al.

Regarding claim 1, Minami et al discloses on figure 15 a semiconductor device comprising a plurality of output bits 36; and a dummy pattern 37 having the same shape as the output bits formed to be adjacent to the end portions of output bit group.

Regarding claim 2, Minami et al discloses on figure 15 a semiconductor device for a driver comprising a plurality of output one bits 36 constituting an output bit group; and a dummy pattern 37 having the same shape as the output bits formed to be adjacent to the end portion of the output bit group.

Regarding claims 3-6, Minami et al discloses on figure 15 all the structures set forth in the claimed invention.

Regarding claim 7, Minami et al discloses on figure 15 a pattern layout method of a semiconductor device arranged with plural output bits comprising the step of forming a dummy pattern 37 having the same shape as the output bits to be adjacent to an end portion of an output bit group.

Regarding claim 8, Minami et al discloses on figure 15 a pattern layout method of a semiconductor device arranged with plural output one bits and constituting an output bit group comprising the step of forming a dummy pattern 37 having the same shape as the output bits to be adjacent to an end portion of an output bit group.

Regarding claims 9-12, Minami et al discloses on figure 15 all steps of the method set forth in the claimed invention.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Publication 2001/0048104 A1 to Miyajima discloses a semiconductor device.
